

Quality Reagents and Services for Life Science

Research means walking new paths...

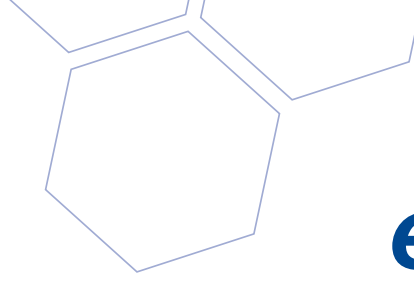

emp BIOTECH is a primary manufacturer of fine chemicals, labelling kits, cell culture transfection agents and solid phases for purification – ranging from early stage R&D through to large-scale manufacturing in pharmaceutical and biotech environments.

We supply our products at scales ranging from a few micrograms to in excess of 10,000 kilograms as a single batch, so you can rest confident in the knowledge that we can meet your requirements at all scales of your production.

With an established reputation spanning more than 20 years, we are fully committed to the philosophy that "*emp*" stands for: **excellence – made possible.**

excellence made possible

We have a wide range of products in our portfolio and offer these in standard and customised packs.

We also undertake custom research and manufacturing projects for our clients.

We are ISO 9001 certified and operate research and manufacturing facilities in Berlin, Germany.

We are pleased to invite you to contact us to discuss your requirements and needs – both as alternatives to existing products but also to see how we might help you develop your research and products using less expensive components without having to sacrifice quality.

So, instead of marching down that well-trodden path, put the “re-” back into your search for high quality and affordable products.

We welcome your inquiries and look forward to meeting you.
