DATA MASONS
EDI MADE SIMPLE®

DATA MASONS EDI FOR MICROSOFT DYNAMICS

BENEFITS FOR DATA MASONS EDI USERS

- Cloud-enabled with a complete browser user interface

- Tight ERP integration without ERP customization

- Scalable and multi-user access provide enterprise-level EDI performance

- Enables EDI users to run EDI without transaction fees

- Partner-specific element level error trapping helps reduce compliance errors and fines

- Trading partner kits can be licensed and implemented in minutes via the Web

- Expert services from consultants that understand your ERP platform and know how to make EDI relationships and integration seamless

EDI is complex. We make it simple and cost-effective with a complete integrated EDI Solution – Data Masons EDI.

An efficient and cost-effective EDI processing platform enables users to achieve EDI integration and compliance with Data Masons EDI. Data Masons EDI is a finished solution with powerful data transformation tools – not just a tool to build a solution.

Data Masons EDI includes everything a company needs for EDI compliance with virtually any trading partner without third-party tools such as translators, mapping tools and labeling systems. Compliance is managed by Data Masons with an all-in-one approach that allows for easy implementation, efficient operation, and ongoing managed compliance coupled with premium support.

Users have access to communication components that connect to all major VAN mailboxes or directly to trading partners. The solution includes a built-in translator, ASN packing system, EDI document management, UCC-128 label print engine, data entry templates for turnaround documents and business connectors for ERP applications such as Microsoft Dynamics 365, 365 Business Central, AX, GP and NAV.

Built on Microsoft SQL Server using the latest .NET development tools, it is a scalable, multi-user solution that will handle enterprise-level EDI processing requirements. Virtually any file format can be integrated into and out of the ERP platform with 24/7/365 processing automation.
