# TIBCO Cloud Integration Software (including TIBCO Scribe software) for Microsoft Dynamics 365 Integration

TIBCO Cloud™ Integration is the cloud-based integration platform as a service, or iPaaS, for anyone looking to quickly and reliably create deep integrations among business applications. For Microsoft Dynamics 365 users, TIBCO Cloud Integration can connect Dynamics 365 modules or many other applications, including HubSpot, Marketo, NetSuite, SAP, and Salesforce.

Works with Every Dynamics 365 Module

TIBCO Cloud Integration connects to every Microsoft Dynamics 365 module, including Sales, Customer Service, Business Central, Operations, Field Service, and Project Service Automation.

Sales

Project Service Automation

Customer Service

Field Service

Financials

Operations

No matter how you want to move data in or out of Dynamics 365, TIBCO can help. Rely on the easy-to-use, collaborative TIBCO Cloud Integration platform for:

- Bi-directional integration – Synchronize data between Dynamics 365 and external applications and databases, or even between different Dynamics 365 modules. TIBCO Cloud Integration offers dozens of Excel-like functions to transform your data as it goes from one system to another.

- Migration – Migrate data from older systems or alternative products into Dynamics 365 or in the other direction.

- Replication – Copy your Dynamics 365 data to a database for reporting and analysis.

Powerful Connectors

TIBCO Cloud Integration includes pre-built connectors for each Dynamics 365 module, allowing you to connect to Dynamics 365 in minutes. These connectors handle three main functions: They establish a connection to Dynamics 365, discover metadata, and perform logical operations.

Connections

TIBCO Cloud Integration connectors allow you to connect to your applications quickly. Simply enter your credentials, the Dynamics 365 URL, and a few other fields, and the system does

the rest. Once you've created a connection, you can reuse it in as many integration and replication solutions as you wish. When your password changes, you update the information once on the connection, not in every solution.

Metadata

After you create a connection, TIBCO Cloud Integration uses the Dynamics 365 APIs to automatically extract metadata, such as your custom objects and custom fields, from your unique Dynamics 365 configurations and your other applications. This capability helps you create an integration that is tailored to all the complexities of your specific application configuration and business workflow. TIBCO Cloud Integration understands relationships between objects and the data type of each field, giving you all the details you need when it comes time to build your integrations.

Logic

TIBCO's Dynamics 365 connectors translate the TIBCO Cloud Integration platform's universal operations such as query, lookup, update, upsert and delete, into specific Dynamics 365 API calls. This feature allows you to use the TIBCO Cloud Integration graphical, no-code integration design environment to create complex integrations without having to learn about the underlying APIs. The connectors support bulk record processing for improved performance as well as retrieval of Dynamics 365 error messages to aid in troubleshooting and special error handling.
