

## Simplify EDI.

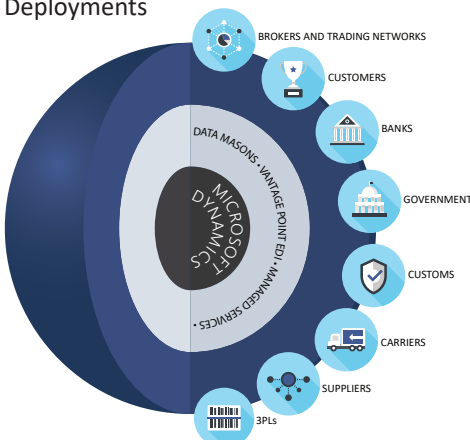

EDI (Electronic Data Interchange) is more than just reformatting and exporting data. Integrating eCommerce business transaction data to ERP systems enables companies to transform their business operationally while adapting to the needs of their trading partners. Connecting systems between suppliers, vendors, transportation, banks, customers and logistics partners accelerates business execution, lowers costs, reduces errors and enables redeployment of human capital to higher value tasks.

Vantage Point EDI® is an advanced transaction transformation and processing platform that combines pre-built business functionality with the ability to transform data from/to any format and web service endpoint. This all happens while enforcing all the business rules, data compliance and exception management that sophisticated businesses need to achieve the greatest level of automation possible.

Built on Microsoft Technologies for Azure and Windows, Vantage Point EDI is a robust platform with thousands of standard document integrations and pre-built partner connections. Vantage Point EDI enables immediate business transaction integrations with customers, suppliers, 3PLs, banks, brokers, ecommerce application platforms, and trading communities such as Ariba.

### FUNCTIONS AND FEATURES

- **“Lights Out” Automation** - 24/7/365 processing automation through EDI Workflow Scheduler, Information Center, Transaction Audit Framework
- **Customizable email alerts** for “management by exception” processing
- **Scalability** supports multi-server instances in both Cloud and On Premise Deployments

### ADVANTAGES

- **Eliminates ERP customizations for hassle-free ERP updates**  
Embedded EDI solutions are inflexible and inhibit ERP updates and upgrades. With ever expanding complexity and interactions, Vantage Point EDI meets the challenge without forcing ERP customizations.
- **Predictable cost of ownership**  
Transacting business electronically can introduce unpredictable costs – specifically transactional costs such as document fees. Data Masons enables our customers to avoid transaction fees by providing fixed and predictable costs for utilizing the platform.
- **Adaptability** to business processes, partner mandates and personnel. Supports ERP customizations without requiring integration of custom code. Over 80 different business transaction integrations cover the documents currently being transacted today by virtually all businesses involved in the distribution and production of goods.

## VANTAGE POINT EDI®

*For ERP solution providers as well as trading partners, Data Masons provides a complete EDI and XML platform that delivers deep document integration and support with host ERP platforms. Data Masons' Vantage Point EDI® solution takes the risk and expense out of EDI integration to Microsoft Dynamics 365, AX, NAV and GP, or Macola ERP platform without ERP customization.*

- **Communication** to all web service endpoints, VAN mailboxes and/or directly to trading partners utilizing standard file formats like EDI, XML, JSON as well as custom web services and flat files accommodates today's trading partner requirements.
- **Blockchain-ready**  
Integration of data to blockchain is already architected into the solution thus “future-proofing” it. Vantage Point EDI does all of the “heavy lifting” and manages integrations to smart contracts and monitors blockchain for new transactions.
- **Compliance and Managed Services**  
Integration and data mapping is handled by our team enabling you to focus on your business. Simplified implementation, efficient operation, and continuing managed compliance combine with transaction flow monitoring to keep your business and partners aligned.
