Enterprise Time and Expense Tracking Software for Microsoft Dynamics®

Journyx for Dynamics GP

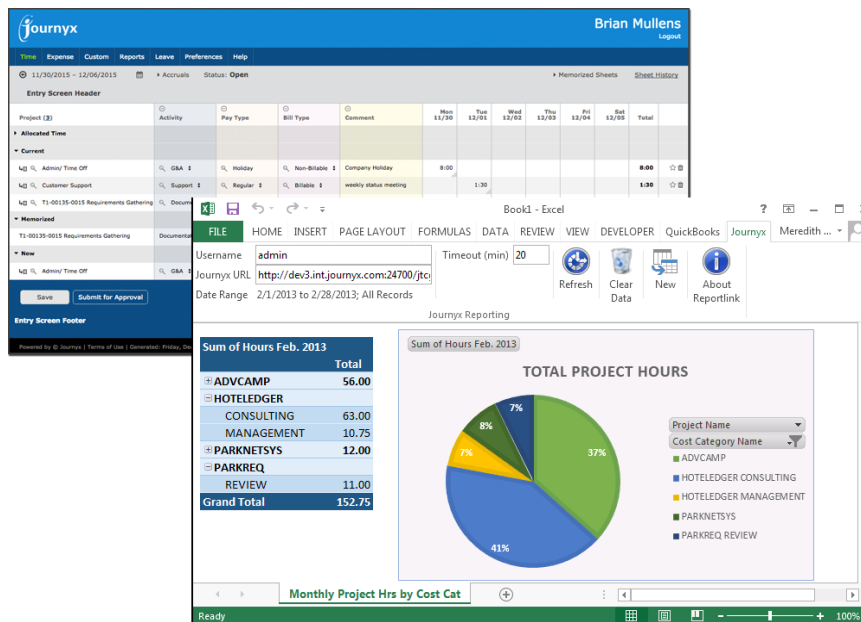

Enterprise Time and Expense Tracking for Microsoft Dynamics

Journyx maximizes the value of all Microsoft Dynamics solutions by adding enterprise time and expense tracking. Journyx for Microsoft Dynamics GP integrates the two systems and allows companies to quickly implement a complete time and expense tracking solution using existing business data.

The key to gathering rich time data is to make it as easy as possible for people to get their time entered in the first place. Whether online or offline, desktop or mobile, local or remote, Journyx makes it easy for people to track all of their time.

Track time one time in one system. Use the data anywhere.

- Integrates with GP and GPPA (including GP 2015), as well as MS Project and other existing business systems (ADP, HR, etc).
- Enter all of your time (including project time and time off) and expenses in one simple user interface.
- Create robust, multi-level approval workflow processes for time, expense and time off management.
- Generate sophisticated web-based reports based on time, project, costing, and process compliance data.
- Track time across devices with mobile entry.
- Bi-directional data transfer options so you can access and use information in the most appropriate manner for your business requirements.
