# Advanced Analytics
for Dynamics AX & D365

Halo meets the challenges of today's complex, distributed supply chain with an advanced information hub for Dynamics AX and Dynamics 365. Escape the constraints of spreadsheet silos and ERP systems without the adding overhead of legacy BI. Halo easily consolidates diverse internal and external data sources into a single data warehouse so that business users can quickly and easily build their own reports, linking elements from each data source for better precision in supply chain planning.

Attend Halo's Partner Solution Showcase at AXUG Summit

Applying Machine Learning and Demand Forecasting in Dynamics AX

Leverage Dynamics AX and D365 data and transform your Demand Forecasting Process. Typical forecasting methods project future sales from past sales levels incorporating seasonality and cyclical trends only. Price, discounts, product features, and sales channel information are often ignored during forecasting and accounted for later in adjustments.

Applying Modern Machine Learning to Demand Forecasting allows for more information to be incorporated into the forecast, higher accuracy and a deep insight into your organization's forecast and overall performance.

Thursday, October 12, 2017
9:15 AM – 10:15 AM
Room: Governor's Chamber E

Hosted by:

Brandon Kirby
VP, Technology & Business Development
