

Powering your A/C and Heater on the Move!!

Power Any Time / Any Where
Engine or PTO Driven

"Grand Prairie Fire started using Mobile Electric Power Solutions to power our auxiliary air conditioner on our ambulances. It allowed us to remove the large gas generator, freeing up more storage space and decreased our down time with A/C issues.

We have now expanded MEPS to all our fire trucks, powering the auxiliary air conditioners with no need for a gas generator. We have had little to no issues with our MEPS generators, if we have had an issue, they have been quick to solve our problem "

Grand Prairie Fire Dept.
Assistance Chief-Operations

The best power option for your EMS vehicles and fire trucks is the MEPS power generation system by MobilePower™. We produce 120V of AC power for your air-conditioning, refrigeration, and other required loads. The generator can either be mounted by a bracket under-hood or by PTO which allows for more available storage space.

Our popularity is due to the low maintenance schedule and cost, that will save both money and vehicle down time.

The MEPS systems have been proven in this mission critical market to be both dependable and reliable by manufacturers and upfitters such as Frazer, Horton, Osage, AEV, Demers, Rosenbauer and Pierce.

In addition to new builds, we also retrofit older ambulances and fire trucks.
