

# TWO RESPIRATORY PROTECTION DEVICES

## ONE MANUFACTURER

### OHD Quantifit®

The OHD Quantifit is a mask fit test device that utilizes its patented controlled negative pressure technology to quantitatively test the integrity of your mask. Perform a mask fit test in as little as 2 minutes without the use of harsh chemicals, fog machines or other consumables.

One tube pulls a negative pressure, and to keep the pressure constant, it has to pull out any additional air that leaks into the mask. This measurement directly tells us how much air has leaked into the mask, and that leak amount is converted to a fit factor.

#### Key Features & Benefits

- ✓ OSHA/NFPA/ISO Compliant.
- ✓ Test in as little as 2 minutes.
- ✓ No consumables needed.
- ✓ Most accurate and precise fit test device on the market

### OHD QuantiCheck™

The OHD QuantiCheck is the world's first ever quantitative user seal check device. Used in conjunction with an approved Fit Test program, the QuantiCheck is designed to indicate to the user if an adequate seal has been made every time the mask is worn. The system checks not only the face seal but the whole mask system for breaches or integrity issues that could cause leaks during use.

The OHD QuantiCheck works by engaging the QuantiCheck, taking a comfortable breath and holding. At the lowest point of the negative pull, the system starts a calculation which is a proprietary algorithm that measures pressure loss from the respirator.

#### Key Features & Benefits

- ✓ Only quantitative user seal check on the market.
- ✓ Go above & beyond the set subjective standards.
- ✓ Increase health protection and limit liability.
- ✓ Check your masks integrity every time it is donned
