# Let's Work Together!

Let's work together... Education = Better Outcomes and Adherence!

Patient Mind Inc. is a 501(c)(3) on a mission to improve clinical dialogue by eliminating the knowledge gap between Clinicians and Patients. We are a virtual community that provides tools for CONFIDENT clinical interactions.

Let's work together on an education activity. The education will prepare patients and caregivers for clinical dialogue, to verbalize the science, to discuss the global impact, to form routines, and to raise disease awareness. The education will feature real stories as a basis to formulate personal coping and caregiving strategies.

Additional educational tools will include education on adherence and treatment options. Also, a communication guide for smart devices, an application platform for tracking & self-care, a specialist finder, measured branch logic outcomes, and social media & survey interaction.

PatientMind.org averages 2,500 patients and caregivers per day. This audience is generated through web, social media, and education channels. 100% of support is applied to delivering valuable tools to improve awareness, quality care, clinical interactions, and patient outcomes. As healthcare leaders... we thank you for your time.

Sincerely,

Kathy Sapp  
President, Patient Mind Inc.
