

Rutter Inc.

For over 20 years, **Rutter**, and our subsidiary, **OceanWaveS** has built a suite of specialty radar processing applications that utilize X-Band radar. The company enjoys significant market share, with 1300+ systems from its **sigma S6** suite in over 40 countries with 90% of sales exported outside of Canada, annually. The **sigma S6** suite operates beyond the traditional navigation radar purpose of collision avoidance by collecting detailed information around sea ice, oil spills, metocean data and target surveillance, that is made available through rudimentary data interfaces.

Within the last 18 months, **Rutter** has rolled-out three (3) new **sigma S6** products: *Current Monitor*, *WaveVision* and *WaveSignal*. Each innovative and game-changing in its own right. And when deployed in concert with our best-in-class legacy products, provides 360° of coverage. From ice to oil spills to current & wave monitoring to small target surveillance, the **sigma S6** suite have become powerful and indispensable tools for mariners, scientists and resource professionals the world over.

sigma S6. Put It On YOUR Radar.

Capabilities

- Wave & Current Monitoring
- Wave Mapping & Wave Prediction
- Oil Spill Detection & Monitoring
- Ice Detection & Monitoring
- Small Target Surveillance

Key interests

- Energy storage and transmission
- Marine energy
- Offshore wind energy

Key customers

- Utilities
- Service Providers
