

## waveRAPID®

Join us for the waveRAPID® Virtual Product Launch –  
The new way of measuring kinetics

**When** February 2, 2021

**What** Product introduction, Guest Speakers, Roundtable Discussion, Live Q&A

Introducing **waveRAPID®** from Creoptix, the new way of measuring kinetics to boost throughput. Instead of relying on a titration series, the waveRAPID® system injects a single concentration, pulsing the sample over the sensing surface at increasing durations, meaning kinetics can be derived from a single well. With no need for serial dilutions or DMSO corrections, set-up time is significantly reduced, runs are faster, and wells are freed up to run more samples.

Join our fantastic line up of scientists from both industry and academia on **Tuesday, February 2, 2021 for a virtual product launch**, produced in partnership with Creoptix. Experts in kinetics, Dr. Michael Hennig, Dr. Thomas Schubert, Dr. Nicolas Bocquet, Prof. Helena Danielson, and Dr. Kaspar Cottier will share how innovative technology can be used to study structural biology and biological interactions and explain the importance of kinetic measurements in the screening and discovery of novel drug molecules.
