

85% of Privia Medical Group's Referrals Confirmed as Needing Treatment

Privia Medical Group has 72 pediatricians across 20 locations, including Manassas Pediatrics. Privia uses GoCheck Kids to conduct photoscreening, and Manassas Pediatrics gathered cycloplegic data from their local pediatric ophthalmologist to determine the efficacy of their vision screening program.

Why GoCheck Kids?

GoCheck Kids is the most effective vision screener we've found for two reasons.

First of all, we were incredibly pleased to see a high positive predictive value - most of the children who were referred to our pediatric ophthalmologist did indeed have abnormalities and were treated with glasses.

Secondly, GoCheck Kids gives us immediate results after we perform the test. We can then make the referral to a pediatric ophthalmologist quickly. This makes it more likely that the parent will actually take them, which leads to increased revenue for the system as well as improved patient outcomes for our population.

-Dr. Anita Flower

Effectiveness of GoCheck Kids at Manassas Pediatrics

Patients Screened:	499	100% of sample
Risk Factors:	30	6% risk factor rate
Patients Seen by Ophthalmology:	20	66.6% follow up rate
Patients with risk factors confirmed:	18	85% Treated

System-wide, Privia Medical Group has detected **326 children** with amblyopia risk factors using GoCheck Kids. How many children are walking into your pediatric clinics with amblyopia or other refractive errors? Integrate GoCheck Kids into your system to increase screening quality metrics and protect kids from vision impairment and blindness.
