

Municipal  
Engineering

## GPI's Commitment to Quality

GPI offers a vast range of municipal engineering services to many municipalities throughout the State of New Jersey. Being a multi-disciplinary engineering firm, we also provide services for planning, surveying, construction inspection, landscape architecture, and parks and recreation design, which encompass the full spectrum of public projects. All of our efforts are guided by decades of local experience, delivering solutions that are timely, high quality and cost efficient.

Our reputation for excellence is built upon the talents of over 1,500 professionals who continue to deliver innovative and sustainable solutions for projects of any size and reinforced by long-term successful relationships with owners, consultants and project stakeholders.

# Building Better Communities by Design

GPI's assignments range from the design of sanitary sewer collection systems and major roadway reconstruction projects to redevelopment plans and recycling centers. We perform extensive survey work for municipal utility authorities, state agencies and local governments, and are active in the planning and design of municipal parks and recreational facilities.

We troubleshoot for municipalities and identify potential problems. Our investigative skills preclude the need for more costly remedial action as we note areas for inexpensive preventive measures.

GPI's broad-based engineering experience ranges from work on multifaceted construction projects to a diversity of public works. We design innovative wastewater disposal facilities, sanitary sewer and stormwater collection systems and large-scale water pumping stations. Our expertise in designing and planning infra-structure projects ranges from street and sidewalk design work for deteriorating roadways to large-scale bridge rehabilitation and reconstruction. We have completed projects for various municipalities and counties as well as the State of New Jersey and the New Jersey Turnpike Authority.

## Services

GPI has in-house municipal engineering expertise and experience, which qualifies our firm to meet goals and objectives in a cost-effective and efficient manner. Our areas of concentration include the following services:
