DISCOVERY

**DRUG DEVELOPMENT
WITH HUMAN CELLS**

Censo Biotechnologies enables the discovery and development of new targeted treatments for disease by using stem cell technology to predict how drugs will behave across a given population.

WE MAKE iPSCs

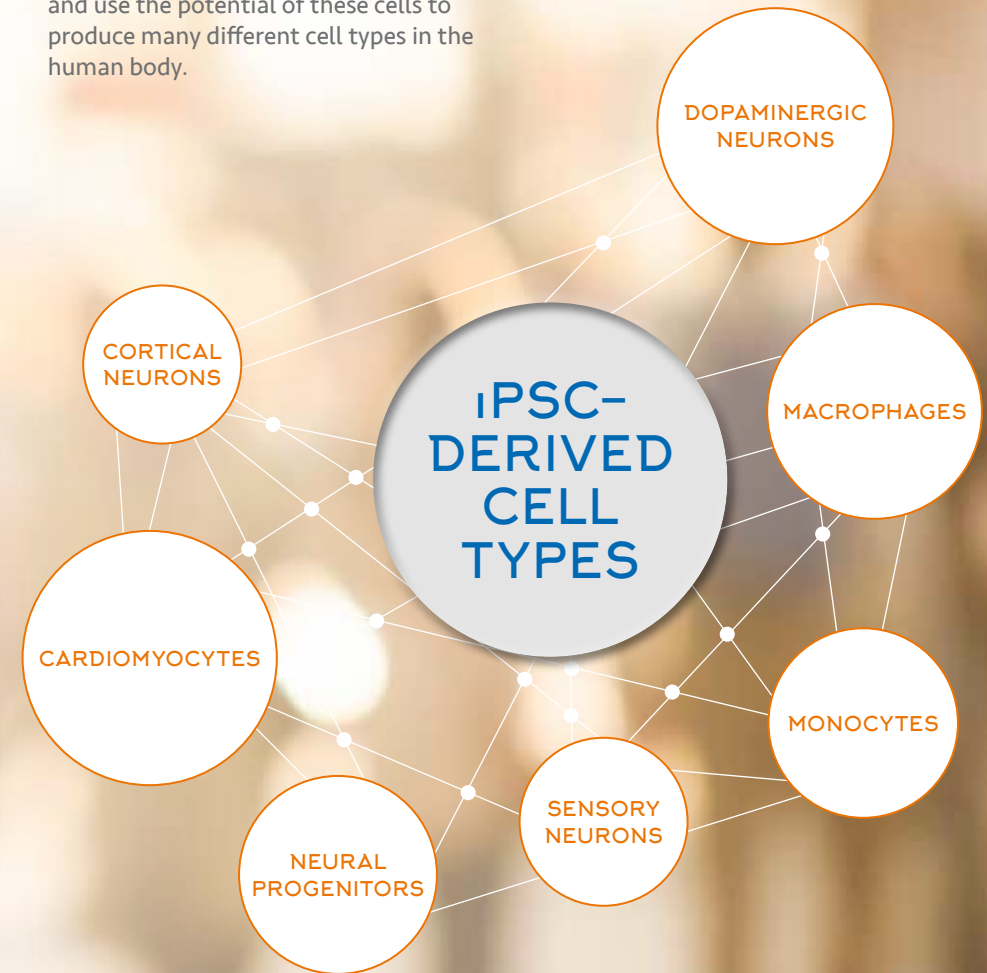

WE USE iPSCs

Censo Biotechnologies Ltd is a stem cell technology company providing human cells and contract research services for drug discovery, toxicity testing and cell banking.

The company has the capabilities to generate induced pluripotent stem cells (iPSCs) from large cohorts of individuals and use the potential of these cells to produce many different cell types in the human body.

By using cells from a diverse range of donors to produce cell based models of disease, the company supports the development of new targeted treatments for disease. Its major focus is the generation of novel data on drug efficacy and drug response variation across a given population.

- Ethical donor recruitment
- Large scale iPSC generation

- Multiple reprogramming methodologies
- Extensive quality control

- Multiple cell types
- Phenotypic assay development

- Compound screening
- Cohort stratification
