

Help patients get the most out of their at-home treatments.

Pneumatic compression therapy for lymphedema, chronic venous insufficiency, and lipedema.

Therapy that's easy to live with.

Designed to keep therapy moving forward.

You've seen it before. Patients with chronic venous conditions that can't or don't stick to the care protocols because the garments are uncomfortable, the technology is difficult to use, or the whole system is incompatible with their lives.

Behind every pump, compression garment, or service call is a true desire to keep your patients progressing forward. We understand the nuances behind therapy interruptions, and pride ourselves in doing whatever it takes to connect patients to treatments that actually work.

Whether answering product questions, setting up reimbursement paperwork, or walking through compression settings, we're here for you and your patients.

83%

of patients polled say
Lympha Press has improved
their condition**

94%

of Lympha Press patients
say they would recommend
Lympha Press**

88%

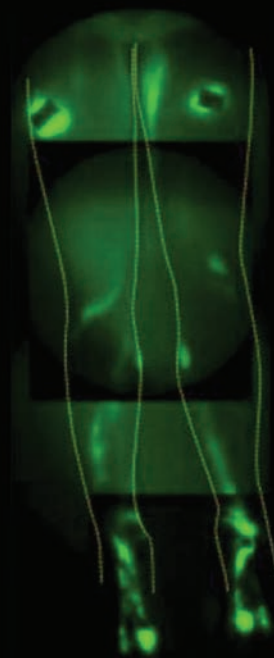

say Lympha Press
is easy to use**

Proven mechanism of action for efficacy you can count on.

Lympha Press is clinically proven to stimulate lymph protein absorption and increase lymphatic return during and after therapy.

- ✓ Range of programs and modes accommodate variations in anatomy and disease state
- ✓ Sequential, gradient compression maintains distal-hold, reducing backflow for effective edema reduction
- ✓ Peristaltic wave mode option facilitates greater therapy adherence for patients with distal discomfort

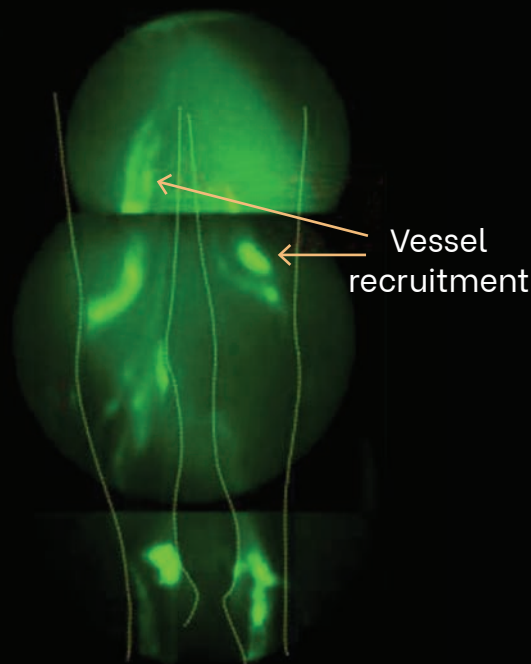

Before Lympha Press

Lymph pumping through patient lymphatic vessels is improved during and after Lympha Press Pneumatic Compression Therapy (PCT).

The use of two completely clear leg garments during Lympha Press PCT allowed quantification of lymphatic pumping velocities and frequencies before, during, and after use.

After Lympha Press

Compression therapy for multiple conditions and lifestyles.

Optimal Plus

Proven therapy that can be tailored to each patient's condition.

- Pre-, post-, sequential, and wave therapy mode options for varying patient needs and conditions
- Adjustable therapy ranges and sequences for more tailored therapy
- Bluetooth enabled for smartphone/tablet integration
- Lympha Press Smart Technology™ learns patients' unique measurements for optimized therapy with each use

PCD-51

Gradient sequential compression with the touch of a button.

- Rapid fill/deflate cycle for patient comfort and more therapy in less time
- Overlapping chambers apply directional massage without gaps in treatment
- Intuitive displays and anti-tamper mechanisms for safe and easy at-home use

ComfySleeve™

Upper body garment for use with Optimal Plus

Lympha Jacket™

Upper body garment for use with Optimal Plus

The right garment can make all the difference.

Lympha Press compression garments are comfortable, easy to use and clean, and are built for everyday use.

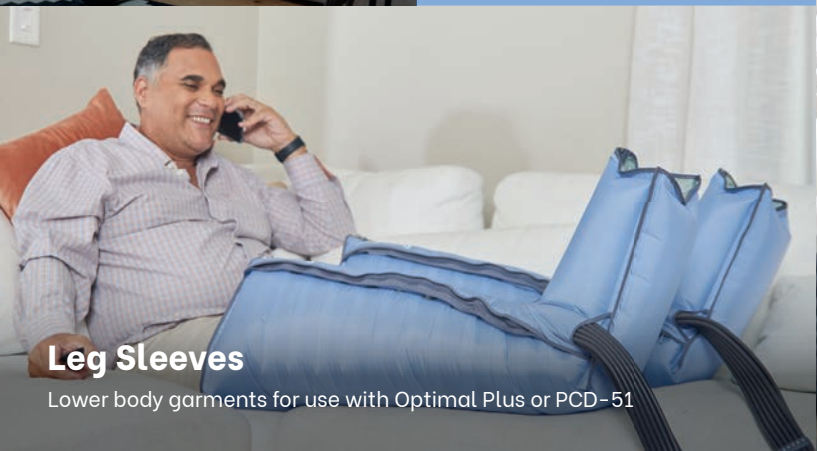

Amputee Sleeve™

Lower body garment for use with Optimal Plus

LymphaPod™

Full body garment for use with Optimal Plus

Leg Sleeves™

Lower body garments for use with Optimal Plus or PCD-51

Lympha Pants™

Lower body garment for use with Optimal Plus

Consider Lympha Press part of your team.

Living with lymphedema, chronic venous insufficiency, or lipedema can be exceedingly challenging. Effectively managing these conditions can be empowering. Our team is committed to delivering at-home therapies that patients can adhere to. And we're known for providing friendly, compassionate service that respects you and your patients.
